DOCKET NO. 2021-88-E

I purchased a solar system several years ago and signed on with an agreed upon rate and fee schedule with what was then SCE&G and is now Dominion Energy. My goal was to save my family money while also creating environmentally friendly energy. The solar program was supported by the power company as well as state and federal governments. Now Dominion is trying to create tariffs that will cost me in excess of \$800 a year in additional fees. I vehemently oppose this. It is one thing to change it for new customers but to create such a hardship for existing customers who agreed to different terms is wrong. The cost of their lack of foresight and infrastructure should not be passed on to the consumer. As Dominion said themselves, "we can't forget about so many who are struggling financially." By trying to increase fees, Dominion is trying to create a financial struggle for their customers who have no choice now but to use the solar equipment they have purchased. Were these new fees to be approved, those systems would cost customers much more to operate. Please support me and other citizens of South Carolina by denying their request.

Sincerely,
Emily Watts
